

# Installing Software.

## 1.) **Turn off all unnecessary TSR's except Explorer and Systray!**

### **To do that:**

Hit the Ctrl, Alt and Delete buttons on your keyboard all at the same time!  
Then highlight an item and push the End Task button.

### **Warning:**

Some programs do not want to End Task the first time. Then, do it again!  
Until the only tasks still running are Explorer and Systray.

### **Also, Turn off the screen saver Program!**

To do that: Click Start, Settings, Control Panel, double click Display. Click the Screen saver Tab. Click the down arrow in the screen saver section, scroll to NONE and click. Click the Apply and OK button.

## 2.) **Go to start, Settings, Control Panel.**

Double click Add/Remove programs, click the Install button, Next,  
The machine first looks in your A Drive for an installation disk, then in other drives,

If it can't find an Install disk, click on Browse and show it where it can find the installation (\*.exe) file for the program.

**Now, just follow Screen Instructions!**

# Removing (Uninstalling) Software

## **Go to start, Settings, Control Panel.**

Double click Add/Remove programs,

Scroll down to the Program you wish to uninstall, click on it to highlight it.  
Then click the Add/Remove button.
